

# TransitLock

SECURE YOUR FLEET

*The authorized use of vehicles and the dispatching of vehicles known to be safe is a primary concern of fleet operators. TransitLock is a device installed on a vehicle and combined with a simple Android application can allow vehicles to idle but prevent them from being shifted into gear without authorization. This allows drivers to leave their vehicle idling, without concern that someone may steal it such as when cooling a vehicle down, when the driver is out assisting a passenger, or when a driver takes a break. TransitLock can also be configured to prevent vehicles failing a Pre-Trip Inspection from being operated. With online access you can remotely authorize or restrict usage by employees as needed. Secure your fleet! Install TransitLock today!*

# TRANSITLOCK FEATURES

## Easy to Use

Any authorized driver can unlock any vehicle in the fleet with a tablet or phone, and their ID and password, or an RFID card. The authorization to unlock vehicles can be removed almost instantly from the management web portal at any time – for instance, when a driver is terminated.

## Operational Security

The system is designed so drivers can leave a vehicle to extend a wheel chair lift and still let the vehicle idle. If the driver forgets, there is assured automatic locking -- it will auto re-lock after a short set time. Any vehicle can be set to be immobilized remotely by management.

## Risk Reduction Safety Improvement

With TransitLock an agency's theft risk is reduced. No longer will management have to fret over anyone other than an authorized driver or trainee taking or driving the vehicle at any time.

## Pre-Trip Safety Assurance

When a critical Pre-Trip inspection item does not meet your standards of safe operation, you can configure TransitLock to automatically make that vehicle inoperable until the issue has been resolved.

## TransitCheck Flexibility

Since the TransitCheck App permits any Android tablet or phone to inspect any vehicle, the implementation of TransitLock within Transit-Check provides that any authorized driver can also operate TransitLock on any equipped vehicle.

## TransitLock Flexibility

Module is easily paired with the vehicle its installed in. If the hardware is ever removed or changed, re-authorizing a TransitLock is simple.

## Implementation Flexibility

TransitLock is simple to install and can be installed in Factory, at a Dealer or Post Delivery while in your fleet.

## Simple User Interface

Simple for driver to operate and very intuitive, there is little training required. Management can remotely lock vehicles from a web portal.
