

# TransitCare<sup>TM</sup>

MAINTAIN YOUR FLEET

*TransitCare is an easy to use cloud-based maintenance system allowing you to be up and running quickly. It is fully integrated with TransitCheck and the TransitLinq scan tool. TransitCare is a full parts inventory system including vendor information for assistance with ordering, notification of low stock levels, identifying stock locations, etc. TransitCare manages workshop staff, differing labor rates, assignment of work orders and, combined with parts used per work order, delivers full asset cost tracking. TransitCare tracks warranties and preventative maintenance schedules. TransitCare can work in a fully integrated environment with other TransitCheck products but may also be used standalone.*

# TRANSITCARE FEATURES

## Easy To Use

Fully integrated with the TransitCheck Pre and Post Trip inspection system so there is a single easy to use, familiar interface. Can work stand-alone as a maintenance system and easily integrates with other systems via standard, published and available interfaces.

## Inventory Management

Inventory and parts tracking and vendor management. Includes set stock levels, order placement info and shipment tracking. Includes parts location for multiple warehouses.

## Manage Warranties

Helps move a shop from Preventative Maintenance to Predictive Maintenance. Also tracks warranties on all inventoried parts plus tires. Will save you money by letting you know before a warranty expires.

## Work Order Tracking

Manages work orders, work assignments and labor including tracking rates. Assigns costs to vehicles to allow for better analysis of vehicle costs and management of maintenance staff.

## Cost Tracking

Detailed cost tracking allows for intelligent asset use decisions. Determine which parts or which vehicles are the most costly. Analyze maintenance staff performance.

## Data Reports

Robust reporting using industry standard VRMS codes to make research, reporting and learning from your data easier. Allows seamless data exchange with other systems.

## Audit Assistance

Tracks all issues from Complaint, Cause, Correction and Certification for return to service making audits vastly easier. Allows tracking of responsibility and follow-up.

## Preventive Maintenance

Tracks preventative maintenance and can be used with the TransitLinq scan tool to automatically report and trigger maintenance events. Automataic notifications can be configured to ensure preventive maintenance activities are not missed.
